

SMART 1

Available while stocks last

The SMART 1 system works on the principle of massage.

During bathing, relaxation is generally subjected to the muscles and joints. It is recommended primarily for the regeneration of the muscular system and improve circulation. It also has healing features that help in bone ailments or in rheumatic diseases.

INFORMATIONS

The richly equipped SMART 1 system, managed by an electronic controller, allows, among others, for independent setting of the water stream direction and massage intensity adjustment for different massage zones.

In addition, installed single-point LED lighting gives the possibility of introducing chromotherapy to the bathroom space. To ensure bath hygiene, like all PoolSpa hydromassage systems, SMART 1 is equipped with hoses with increased antibacterial properties.

Properties

Basic data

Control: **electronic**

Drainage: **no**

Electric heater: **57**

Pump drainage: **yes**
